## 5-STEP CYBER HEALTH CHECK

Our **5-Step Cyber Health Check** service has been designed to help organisations ensure that their systems are secure against a cyber threat, and their data protection measures follow the recommendations set out by the National Cyber Security Centre.

### 1. User Device Checks

A selection of devices are checked to ensure they have working anti-virus & **anti-malware** software, secured user accounts and supported and **patched** operating systems.

### 2. Vulnerability Scans

Your devices are checked for known **vulnerabilities** using industry standards, on various devices such as workstations, firewalls & networking devices, printers and VoIP telephones.

### 3. Firewall Review

Your internet **firewall** is checked to ensure it is **secure**, that any rules or external services are configured correctly, and that the firewall is still supported with firmware by the vendor.

### 4. Policy Reviews

Your cyber related policies will be reviewed for **compliance** (password policy, security policy, backup policy, privacy policy), and some policy templates are supplied for you to use for **free**.

### 5. Cyber Certificate

Finally, the NCSC supported **Cyber Essentials** certification is included, together with **free cyber insurance** to cover your organisation if it suffers a cyber attack or data breach.

Remote  
or Onsite  
Service

Free

### Service Delivery

The service can be delivered either onsite or remotely, with a device pre-configured with industry standard testing software to scan your systems non-intrusively. The whole process can be completed in a single day (depending on our findings).

### About Us

Jovasi Technology was formed in 2008 to provide a range of technical solutions to organisations, and have grown to provide various additional services such as information & cyber security consultancy.
